

In order to be enrolled in the computer software, the person's finger is scanned by the finger scanner.

The computer software develops a grid of intersection points from the swirls and arcs of the scanned finger.

A template is created by the software that shows the intersection of unique points on the finger.

The software stores a set of numbers that can only be interpreted as a template.

12131952

When the person returns to be identified, the finger scanner again scans the finger.

The computer software now compares the new template (Template A) with the other templates in the database. When a matching template is found (Template B), the person is identified.

This identification and matching process takes under one second to complete.

**REMEMBER: AT NO TIME IS A FINGERPRINT IMAGE EVER STORED.
NO FINGERPRINTS CAN BE RECREATED FROM THE TEMPLATE!**

Differences Between Identification Software and Law Enforcement Applications

Identification Software	Law Enforcement Applications
Uses flat images of only two fingers to create templates	Captures rolled images of all 10 fingers
Flat images reveal the center of the finger and require only a minimum of unique identifying points in order to make a match	Rolled images capture unique identifying points on the entire finger surface in order to collect the maximum number of unique identifying points
The purpose is to identify a person already enrolled in the software	The purpose is to identify suspects based on fingerprint images directly taken from a crime scene

Frequently Asked Questions

“Can my fingerprint be given to anyone else?”

No. There are no fingerprint images stored. Only numerical representations of the unique points of the fingerprint are stored.

“Can my fingerprint data be taken off the computer and used to re-create my fingerprint?”

No. There is no way for any fingerprint expert, or anyone else, to take the numerical representation and reconstruct a fingerprint image from the data. There is no way to “reverse identify” a person.

“Can my fingerprint be taken from the computer software and used on another fingerprinting system?”

No. Because of the way the template of unique points is stored, it is useless to a law enforcement application.

“Can my fingerprint be copied or used by anyone else?”

No. It is impossible to duplicate or falsify fingerprints from the information stored by the computer software.

“Are my finger-scan templates given or sold to anyone?”

No.
